

Position: Production Manager

About the Employer:

Incorporated in 1884 for the first time, our client is a leading global supplier of plastics-processing technologies and industrial fluids, with major manufacturing facilities in North America, Europe and Asia. He knows what matters in manufacturing, and every day he puts his know how at work in order to help customers improve their productivity, cut costs, increase energy efficiency, dispose of industrial waste and reduce cycle times.

Location:

Jiangsu, China

Job description:

- Direct and manage all stages of assembly, including assembly, sub-assembly, manufacturing, fabrication of metals, paint / pack / ship, and planning.
- Hold regular meetings to schedule and coordinate activities.
- Develop and maintain rolling 3-month-production-schedule.
- Ensure accurate reporting of production hours by the machine and by the week.
- Ensure accurate reporting of materials receipts and disbursements in the UF system; take accurate inventories if required.
- Develop appropriate work activities if machine orders are lacking or waiting for material, take action optimising the utilisation of labour.
- Source any services in the fields of plant maintenance, cleaning, maintenance of the grounds, construction and packing / shipping machines out to outside providers.
- Manage the availability of tools and standard materials (mechanic, hydraulic & electric).
- Develop and monitor the budget of the department.
- Implement changes and improvements in processes and facilities.
- Manage operations in a safe way and in an environmentally responsible manner. This includes the management of the safety standards such as wearing safety shoes, helmets if required, regular checks of lifting devices, continuous training on safety at work.
- Interact professionally with customers in the plant and field.
- Assure and keep up a constant level of quality at work.
- Develop comprehensive operating plans, budgets, capital expenditure plans, major maintenance projects, on all staffing levels, and select key personnel.
- Cooperate with the Quality Manager in order to improve the Supplier Quality, achieve machine validation and resolve customer issues.
- Manage and - if required - train the personnel of your own department-
- Set the operations (incl. KAIZEN)/ department / area standards e.g. with regards to keeping the plant clean and tidy, to attendance and teamwork.
- Set the warehouse standards and manage its proper operation.
- Arrange for communication training for employees /customers.
- Demonstrate personal leadership; take an active part in solving problems and in continuous efforts of business improvement.
- Demonstrate flexibility if facing a high level of stress, an emergency, changes of priorities or new assignments.

Qualification:

- This position requires several years of working experience and very good command of English! You must be a mechanical engineer with at least bachelor degree and you will preferably have some expertise in the field of injection Moulding Machines. Knowledge of the German language would be a bonus.
