

Saint-Gobain Research (Shanghai) – SGRS

World class R&D center
Innovation and Excellence for Saint-Gobain

REALIZING
THE POTENTIAL
OF THE BUILT
ENVIRONMENT
YOU'LL BE
INSPIRED!

Leveraging nearly 350 years of experience, Saint-Gobain is building the world of the future. Our goal? To create a sustainable habitat by inventing innovative solutions to the challenges of growth, energy, efficiency and the environment. To bring this goal to life, we need talented people who are ready to take on these challenges with us. If you are as motivated as we are to tackle some of society's greatest challenges, then come join us.

Before applying, learn more about our employees' secret at www.saint-gobain-experience.com

SGRS - one of the major R&D centers of Saint-Gobain worldwide is located in the Minhang Development Zone, at the heart of its Shanghai industrial complex, neighbouring 6 of our plants involved in Performance Plastics, Glass for Automotive, Abrasives and Ceramics.

Mirroring the extraordinary richness of Saint-Gobain technology, this Center hosts scientists in almost all advanced material sciences from ceramics to polymers, glass to iron cast, crystals to abrasives, inorganic grains & powders to refractories...and reaches variety of research fields including: material science, chemical engineering, mechanical engineering, modeling and building energy as long as grinding, coating, Optical Detection etc.

The center builds a strong technical competency in product development, in-depth scientific research and analysis, rapid response to business requests and frontline technology development. Equipped with modern scientific equipments, SGRS is taking part in fast-changing technical evolution. Polymer material processing, Abrasives, Powder processing and Optics Inspection are four established technical areas which are in direct linkage with SG products. Other competencies dealing with construction materials, refractories, quartz, cement and pipe are growing to strongly supporting SG group in Asia.

Along with the sustained business development in Asia, SGRS is rapidly developing. New office building Phase II project with 8290 m2 is now underway and this will provide more comfortable and safe working environment along with many career opportunities for more than 400 research scientists.

We are "A welcoming, strong, open-minded company that offers long-term career opportunities". Welcome to join!
